Carpet Subfloor Membrane

No Plywood, No Nails, No Glue

DOUBLE DIMPLED CARPET SUBFLOOR

PRODUCT BENEFITS

✓ Double Dimple Design

The unique double dimple design allows both the substrate and the flooring to breathe. This provides air flow under & above the membrane.

✓ Ultra Thin Profile - 2.8mm (0.11")

Ultra thin profile and high compressive strength allow for tack strips to be nailed directly through the membrane. In addition, furniture legs will not damage it.

✓ Easy Installation

Carpet Subfloor Membrane is quick and easy to install requiring no plywood or additional fasteners. The dimple configuration allows the membrane to interlock when overlapping seams.

✓ Economically Priced

A high performance, low cost subfloor membrane that saves you money by eliminating the need of additional expenses from plywood systems.

✓ Permanent Moisture Barrier

Made from tough long lasting plastic, Carpet Subfloor Membrane stops substrate moisture from absorbing into underlay, carpet and wood.

CARPET SUBFLOOR MEMBRANE

Moisture will always find a way through cracks or voids and into your home. When carpet gets wet and does not have proper protection or ventilation, the trapped moisture can damage your flooring attracting mold and mildew and creating expensive repairs. Carpet Subfloor Membrane provides full surface ventilation and maximum protection for your new floor.

Not intended for load bearing walls.
